GATE MEASURING SHEET

Our measuring sheet serves as a how-to guide on measuring for your walk/driveway gate. By following these three easy steps, you will be able to successfully order and install your gate in no time!

Step 1:

By visiting our website, you will be able to choose from a wide variety of styles that meet your needs and preferences. If you don't find a style you like, we will work on a style that best suits you. After you've selected your desired style, you may add your own personal touch by selecting from a wide variety of finials, castings, rings, inserts, letters, etc.

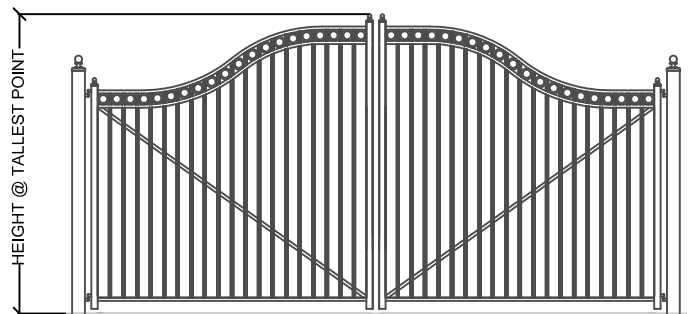

Step 2:

Now that we have worked out a design, a few measurements will need to be determined. If you plan on mounting to existing/new columns, we will need the overall opening between the columns and the overall height of the columns. If you will be using pre-made posts purchased from us, we will need the overall width of your driveway/opening. Once you supply the opening dimensions we will be able to calculate the exact measurements to allow for posts, hinges, etc.

Step 3:

The last measurement needed will be the overall height desired for your gate at its tallest point. If you go with a rolled style like the picture to the right, we will need both the desired height at the gates tallest point, and the height of the gate at its mounting point.

*Please call our toll free number or e-mail us if you need any further assistance in measuring for your gate.
